About Me

Dedicated Software Engineer specializing in user-centric web applications. Experienced in HTML, CSS, SASS/SCSS and JavaScript for creating intuitive digital experiences. Proficient with modern frameworks and libraries like React.js, Next.js for dynamic interfaces, and skilled in Node.js, Express.js and Nest.js for robust back-end APIs. Passionate about delivering high-quality web solutions that meet user and business goals.

Education

Baku State University

September 2020 – July 2024

Bachelor degree in Computer Science. Completed a comprehensive education in Computer Science, gaining a solid foundation in both theoretical knowledge and practical experience.

Azerbaijan Technical University

September 2024 – Present

Master degree in Mathematical and Economic Methods of Optimal Management. Efficiently programming mathematical problems involves applying algorithms that minimize computational complexity while ensuring accurate solutions.

Experience

VABISS

July 2024 – August 2024

FRONT-END DEVELOPER INTERN

- Collaborated with **Node.js** Back-end Developers, Machine Learning Developers, and Data Analysts.
- Primarily used **React**, **Tailwind CSS**, **Redux Toolkit**, and **Axios** for front-end development.
- Supported back-end development in **Node.js**.
- Worked in an integrated manner with the team to ensure smooth development and deployment processes.
- Gained experience working with a team on **GitHub**.

VABISS

August 2024 – February 2025

FRONT-END DEVELOPER

- Developed and maintained front-end applications using **Next.js** with **TypeScript** for server-side rendering and improved type safety.
- Utilized **Material UI** and **Minimals.cc** to create modern, responsive, and visually appealing user interfaces.
- Implemented state management with **Redux Toolkit**, ensuring scalable and maintainable application logic.
- Integrated **React Query** for efficient data fetching, caching, and synchronization with back-end services.
- Collaborated with back-end developers and machine learning teams to integrate APIs and models into the front-end.

FRONT-END DEVELOPER

- Developed and maintained scalable front-end applications using React, TypeScript, and SCSS.
- Followed a company-specific styling pattern and used an in-house component library to ensure design consistency.
- Built responsive and accessible UI components aligned with the internal design system.
- Implemented Redux Toolkit for efficient state management and to maintain predictable application state.
- Collaborated with designers and back-end developers for seamless API.
- Used GitLab for version control, code reviews, and managing CI/CD pipelines.
- Managed tasks using Jira, following Agile methodologies to deliver features efficiently and transparently.

Skills

HTML 5 | CSS 3 | SASS / SCSS | Bootstrap | Tailwind CSS | JavaScript | TypeScript | React.js | Next.js | Context Api | Redux Toolkit / RTK Query | React Query | Node.js | Express.js | Nest.js | MongoDB | Git / GitHub / GitLab

Projects

Bookly Hotel Booking

Bookly is a comprehensive hotel booking platform built with Next.js and MongoDB. This application allows users to search for hotels, view available rooms, and make reservations with ease.

Thirteen Blog

Explore a dynamic MERN stack blog website built for seamless user and post management. Leveraging Express.js and MongoDB on the server side and Vite, React, Flowbite, Tailwind CSS, Redux Toolkit, and Firebase on the client side, this platform offers a modern user experience. Effortlessly manage users and posts, engage in discussions with comments.

Restaurant API

This project is a RESTful API for managing restaurants and their meals, built with Nest.js. The API allows for CRUD operations on restaurants and meals, along with authentication and authorization mechanisms. Images are stored securely using AWS S3.

[GitHub](#)

Valorant Wikipedia

A fully responsive Valorant Wikipedia built with React and Valorant API. Get detailed information about agents, maps, and weapons.
